It is practically at geographical center of India, in fact the zero milestone of India is in this city. All major highways NH-7 (Varanasi - Kanyakumari) & NH-6 (Mumbai - Sambalpur - Calcutta) and major railways trunk route (Mumbai, Chennai, Howrah * Delhi) pass through the city. Important Central & State Government offices and institutions are located in Nagpur. Industrial Development is existing along the fringe areas like Kamptee, Hingna, Wadi, Khapri, Butibori and Kalmeshwar. Nagpur is 837 kms. From Mumbai, 1094 Kms south of Delhi, 1092 kms north of Chennai and 1140 kms west of Calcutta. Nagpur district lies between 20.35 to 21.44 North Latitude and 78.15 to 79.40 East Longitude. The surrounding region is an undulating plateau rising northward to the Satpura Range, from 889 to 2,142 feet (271 to 653 m) high and is drained by the Kanhan and Pench rivers in the center, the Wardha in the west, and the Wainganga in the east. Both these rivers later merge as tributaries into the Godavari river. The soil is fertile black (cotton) in the west and the north and alluvial in the east. The average annual rainfall is 45 inches, with more rain in the east than in the west. In the west, the hills are forested. In the northeast are the hills of Ramtek.

1.2 Topography:

Nagpur district lies between 20.35 to 21.44 North Latitude and 78.15 to 79.40 East Longitude., in the plain to which it gives its name at the southern base of the Satpuda Hills. It has an area of 9,892 Sq. km. The district is bounded on the north by the Chhindwada and Seoni districts of the Madhya Pradesh, on the east by Bhandara, on the south and west by Chanda and Wardha, respectively, and along a small strip on the north-west by the Amravati district. The northern range of hills extends along the whole border, being pierced only in two places where the Kanhan and Pench rivers have broken through. On the west it consists merely of the outlying foothills of the Satpudas, the plateau proper lying behind them in Chhindwada. But from the Kanhan to the Pench, it is the major range of the Satpudas themselves which dominates the

landscape, and the ascent of the Khamarpani plateau is made in Nagpur. Along this length the hills are well wooded and picturesque, and there is some striking scenery on the Pench river. In the Archaean area the rocks are hidden beneath a considerable thickness of alluvial soil, deposited by the tributaries of the Kanhan and the Wainganga rivers. In the trappean area the soil is usually the black cotton soil known as regur with Kankar, which is also found in the soils on the Archaean areas. The climate of this district is characterised by a hot summer, well distributed rainfall and dryness except in the rainy season. The cold season is from December to February and is followed by the hot season from March to May. The south-west monsoon season is from June to September while the period October-November constitutes the post-monsoon season.
